Challenge Ropes Course

Haac has constructed many large-scale challenge ropes courses which consist of high elements and/or low elements. High elements refer to challenges at a height of 4m to 12m while low elements start from 30cm to 3m above ground level.

Other than the traditional outdoor challenge courses, Haac is also familiar with the indoor challenge courses which can be used throughout the year irrespective of the weather. Haac's works also include mobile challenge courses, a temporary and perfect structure for both indoor and outdoor special events.
